

Project Proposal

Requirements

- 1) Brief description of project (what it do?), describe the competition (other similar applications?)
 - I want to create a website that is a **campus-exclusive online marketplace** designed specifically for college students to safely buy and sell items within their university.
 - **The platform allows students to:**
 - Create and manage listings
 - Upload item images
 - Search and filter listings
 - Message other students
 - Mark items as sold
 - Report inappropriate listings
 - There are other similar platforms, but I wanted to make a very simple and user-friendly version that also has a catchy name that clearly defines the app.
 - **Competitive Analysis**
 - Competes directly with apps such as:
 - rumie
 - Zellit
 - UniExchange
 - Necessities
 - Deck Marketplace
 - Etc.
 - competes indirectly with:
 - Facebook Marketplace
 - Craigslist
 - OfferUp
 - Differentiation
 - .edu email verification
 - Campus-only listings
 - Student-focused categories (Textbooks by course, Dorm Essentials)
- 2) Describe the target audience (who's going to use this? where? why?)
 - **Primary Users:**
 - College students
 - Students moving between semesters
 - **Usage Context:**
 - Dorm rooms and apartments near campus
 - Class materials
 - **Why They Will Use It:**
 - Localized listings
 - Safer student-only environment
 - Easier textbook resale
 - Semester-based turnover
 - Paying fractions of the cost

- 3) Overall plan (a prioritized list of features, a list of tasks to complete, or a combination of both)
 - The following is a general idea but not a complete list of the plan. There will need to be features added throughout the project as they seem fit.
 - **Phase 1 – (Highest Priority)**
 - Creating the name, logo, webpage layout
 - User registration & login
 - Email verification system
 - Secure authentication
 - Create, edit, delete listings
 - Image uploads
 - Category system
 - Search and filtering
 - Post details page
 - Mark listing as sold
 - **Phase 2 – Intermediate Features**
 - Messaging
 - User profiles
 - Favorites/Saves
 - Infinite scrolling
 - Report listing functionality
 - **Phase 3 – Advanced Features**
 - Admin moderation dashboard
 - Role-based permissions
 - Notifications (new message, item sold)
 - Unread message indicators
 - Filter options
 - Deployment to cloud hosting
- 4) Next sprint plan (what will you get done in the next two weeks?)
 - **Week 1-2**
 - Create GitHub repository
 - Start thinking of the database schema
 - Think about user authentication
 - Think about the layout of the initial site
 - Decide on color palette and font styles
 - Design a logo
 - Design the layout of each post
- 5) **If working in a Team:** a list of the team members, how you will communicate and work together, and responsibilities.
 - This is an individualized project
